

Session 11 Quiz — Monitoring, and Domain 3 Checkpoint

Name: _____ Session: _____

Time: 15 minutes · **Items:** 12 · **Target:** 80%

Answer every question. For *select all that apply*, mark every correct option. For matching questions, write the matching term next to each numeral. For yes/no sets, write yes or no next to each numeral. Your instructor reviews every answer in class immediately afterward.

1. What does Azure Advisor do?

- A. Reports whether Azure itself is experiencing an outage
- B. Evaluates your Azure resources and makes recommendations to improve reliability, security, performance, operational excellence, and cost
- C. Collects and queries log and metric data from your resources
- D. Estimates the cost of resources before you deploy them

2. Which are Azure Advisor recommendation categories? (Select all that apply.)

- A. Reliability
- B. Security
- C. Performance
- D. Operational Excellence
- E. Cost

3. A virtual machine in your subscription is unreachable and you need to know whether the problem is on Azure's side or yours, for that specific VM. Which view should you check?

- A. Azure Status
- B. Service Health
- C. Resource Health
- D. Application Insights

4. You hear reports of a widespread outage and want a global picture of Azure health across all services and regions. Which view should you check?

- A. Azure Status
- B. Service Health
- C. Resource Health
- D. Azure Advisor

5. Which information does Service Health show that Azure Status does not?

- A. Outages, planned maintenance, and health advisories specific to the services and regions you actually use, with alerting
- B. The global health of every Azure service in every region

- C. Application request rates and response times
- D. Estimated monthly spend by resource group

6. (Match each need to the Azure Monitor capability that fits: Log Analytics, Azure Monitor alerts, Application Insights.)

- i. Write and run a query against collected data to find all errors in the last hour

- ii. Be notified when a virtual machine's CPU stays above 80 percent, with the notification routed to an on-call group _____
- iii. Track a web application's request rates, response times, failure rates, and dependency calls

7. (Domain 3 checkpoint — cost management.) (Match each need to the right capability: the pricing calculator, Microsoft Cost Management cost analysis, budgets with alerts, tags.)

- i. Estimate what a proposed design will cost in two candidate regions before deploying it

- ii. See where spend has already accrued, broken down by subscription, resource group, or service

- iii. Be notified when spending crosses a defined threshold, and optionally trigger automation

- iv. Attach the metadata that makes cost reports answer "which cost center" and "which environment"

8. (Domain 3 checkpoint — governance and compliance.) (For each statement, answer yes or no.)

- i. Azure Policy can prevent a noncompliant resource from being created, and also evaluates resources that already existed. _____
- ii. A Delete lock allows authorized users to read and update a resource but not delete it.

- iii. Microsoft Purview's purpose is to discover and classify data across your estate and trace its lineage.

- iv. A subscription Owner can delete a resource that has a Delete lock applied, without removing the lock. _____

9. (Domain 3 checkpoint — managing and deploying.) (Match each need to the right option: Azure portal, Azure Cloud Shell, Azure Arc, infrastructure as code, ARM template.)

- i. A browser-based shell, already authenticated to your credentials, supporting both Azure PowerShell and the Azure CLI _____
- ii. Govern servers in your own datacenter and Kubernetes clusters in another cloud from Azure

- iii. A declarative JSON file describing the resources to deploy, which Azure validates and orchestrates

- iv. The practice of managing infrastructure through code and templates rather than manual configuration _____

- v. A web console with custom dashboards for building, managing, and monitoring resources
-

10. For an application hosted on an IaaS virtual machine, which responsibilities are the customer's? (Select all that apply.)

- A. Operating system patching
- B. Physical datacenter security
- C. The data stored by the application
- D. Identity and access configuration
- E. Maintenance of the physical network

11. An organization needs a private, dedicated connection from its datacenter to Azure that does not traverse the public internet. Which option meets the requirement?

- A. Site-to-site VPN
- B. Point-to-site VPN
- C. Azure ExpressRoute
- D. Virtual network peering

12. Which action best reflects the Zero Trust principle of "assume breach"?

- A. Trusting all traffic originating inside the corporate network
- B. Segmenting access and verifying end-to-end encryption to limit the impact of a compromise
- C. Requiring a password of at least 16 characters
- D. Publishing all applications through a single public endpoint

Answer sheet

#	Your answer	#	Your answer
1		7	
2		8	
3		9	
4		10	
5		11	
6		12	

Score: ____ / 12

Objectives to review: _____
