

Session 1 Quiz — Cloud Computing Foundations

Name: _____ Session: _____

Time: 15 minutes · **Items:** 12 · **Target:** 80%

Answer every question. For *select all that apply*, mark every correct option. For matching questions, write the matching term next to each numeral. For yes/no sets, write yes or no next to each numeral. Your instructor reviews every answer in class immediately afterward.

1. A dental clinic stops buying servers and starts renting compute, storage, and networking from a provider, delivered over the internet. Which statement best describes what the clinic adopted?

- A. Running virtualization software on servers your organization owns
- B. Delivering computing services such as compute, storage, and networking over the internet
- C. Backing up on-premises data to a second building
- D. Buying servers in bulk to lower the cost per unit

2. A manufacturer uses infrastructure, platform, and software services at the same time. Which items remain the manufacturer's responsibility in every one of those services? (Select all that apply.)

- A. The data and information you store in the cloud
- B. The physical hosts running your workloads
- C. The accounts and identities in your environment
- D. The physical network in the datacenter
- E. The devices allowed to connect to your cloud resources

3. An auditor asks which parts of the environment the cloud provider owns no matter which service the customer bought. Which three items are always the provider's?

- A. Operating systems, applications, and network controls
- B. The physical datacenter, the physical network, and the physical hosts
- C. Identity and access, data, and devices
- D. Middleware, runtime, and application code

4. You deploy a virtual machine in Azure and install a database on it yourself. Who is responsible for applying database patches?

- A. Microsoft, because the VM runs in Microsoft's datacenter
- B. You, because you installed and manage the software on the VM
- C. Neither party; database patching is automatic in Azure
- D. Microsoft for security patches, you for feature updates

5. A university wants the service type that leaves them responsible for the operating system and everything installed on it. Which type places the most responsibility on the customer?

- A. SaaS
- B. PaaS

- C. IaaS
- D. All three place equal responsibility on the customer

6. An organization runs a cloud environment used only by itself, hosted in its own datacenter. Which cloud model is this?

- A. Public cloud
- B. Private cloud
- C. Hybrid cloud
- D. Multicloud

7. One agency can buy cloud services the same way any other customer can. Another runs a cloud used only by itself. What most clearly distinguishes the first arrangement from the second?

- A. A public cloud is always cheaper
- B. A public cloud is available to anyone who wants to purchase the services
- C. A public cloud cannot be used for regulated workloads
- D. A public cloud has no service-level guarantees

8. A retailer keeps its customer database on its own private cloud infrastructure but wants to add public cloud capacity during a seasonal sales spike. Which cloud model does this describe?

- A. Public cloud
- B. Private cloud
- C. Hybrid cloud
- D. Sovereign cloud

9. An organization uses services from two different public cloud providers and manages resources and security in both. What is this arrangement called?

- A. Hybrid cloud
- B. Multicloud
- C. Private cloud
- D. Community cloud

10. A startup has no existing hardware, expects unpredictable growth, and wants to avoid buying servers. Which cloud model is the most appropriate starting point, and why?

- A. Private cloud, because it gives complete control over resources and security
- B. Public cloud, because it requires no capital expenditure to scale up
- C. Hybrid cloud, because it provides the most flexibility
- D. Private cloud, because data is not collocated with other tenants' data

11. A hospital is still purchasing physical servers and expanding its own datacenter before any workload moves. Which term describes that up-front spending?

- A. Operational expenditure (OpEx)
- B. Capital expenditure (CapEx)

- C. Consumption-based spending
- D. Total cost of ownership

12. A retailer adds extra capacity for a holiday weekend and releases it on Monday so the bill stops. Which statement about the consumption-based model does this illustrate?

- A. You pay a fixed monthly fee regardless of usage
- B. You buy capacity a year in advance to guarantee availability
- C. You pay for the resources you use and can release them when demand drops
- D. You pay only for storage; compute is included

Answer sheet

#	Your answer	#	Your answer
1		7	
2		8	
3		9	
4		10	
5		11	
6		12	

Score: ____ / 12

Objectives to review: _____
